VERYON VS. OEM: THE VALUE BEYOND THE PRICE TAG

The Unrealized Value Inside
Your Veryon Subscription

Introduction

At first glance, OEM subscriptions often look cheaper. It's a comment we hear from operators all the time: "Why does Veryon cost more?" And it's a fair question. But here's the truth: when you're managing the airframe, engine, propeller, and component publications across your fleet, the number on the invoice doesn't tell the whole story.

With Veryon, you're not just paying for access to documents. You're investing in a single source for everything you need, with compliance tracking, modernized tools, and AI-powered navigation built in. That "hub fee" isn't overhead; it's the technology that saves you hours, reduces risk, and simplifies your operation.

Price is what you pay. Value is what you get. And when you look beyond the price tag, Veryon delivers far more value than fragmented OEM subscriptions ever could.

The OEM Price Illusion

FEATURE	VERYON PUBLICATIONS	STANDARD OEM
Multi-OEM Access	● Single source for all airframe, engine, propeller, and component OEMs	● Separate logins for each OEM; no fleet-wide view
Centralized Library Packages	● Multi-OEM & regulatory content bundled in one subscription	● OEM-specific only; must manage multiple separate subscriptions
Regulatory Libraries	● FAA, EASA, CAA, ADs, SBs, TCs, STCs, MMELs	● No regulatory content; AD/SB tracking must be manual
Interactive Document Viewer	● Table of Contents, full-text search, hyperlinks	● Search often limited
AI-powered Document Navigator	● Natural-language Q&A with direct references	● Not available
Aircraft Compliance Tracking	● Track ADs, components, fleet-wide compliance	● Often tracks SBs but not ADs; only covers that OEM's aircraft
Maintenance Tracking Integration	● Integrated with maintenance tracking & troubleshooting systems	● Not available
Mobile & Offline Access	● iOS/Android with offline capability	● Limited mobile capabilities
Real-time Content Monitoring	● Automated OEM/regulatory change tracking	● Updates vary; manual checks often required
Customizable Alerts	● Customizable alerts for ADs, revisions, and subscribed content	● Inconsistent or nonexistent alerting
Parts Request & Ordering	● Order from multiple OEMs with IPC quick-add	● OEM-only parts; no sub-supplier coverage; often unintuitive
Forms Library	● Preloaded & fillable compliance/inspection forms	● Not available
Support & Security	● 24/7 support, Knowledge base, ISO 27001, SSO/SAML 2.0	● FAQ only; limited or slow account setup

OEM portals do their job: they provide manuals for the products they manufacture. But that's where it ends. For operators, that means:

- Multiple subscriptions for each OEM
- Different logins and outdated, hard-to-navigate portals
- Time wasted switching tabs and digging for content
- Manual effort for AD research

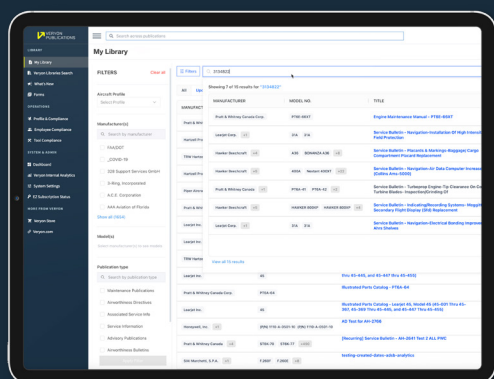

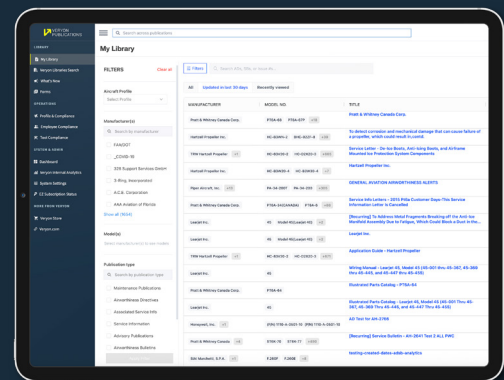

On paper, the OEM cost looks lower. But the real cost comes from lost productivity, duplicated effort, and compliance risk.

The Value Built Into Veyron Publications

A Single Source for All Publications

Access all your airframe, engine, propeller, and component OEM publications, plus regulatory content from one centralized hub. With a single login and a unified interface, Veyron eliminates the need to juggle multiple OEM portals or manage separate subscriptions. It's everything you need, all in one place, saving you hours of administrative work every week.

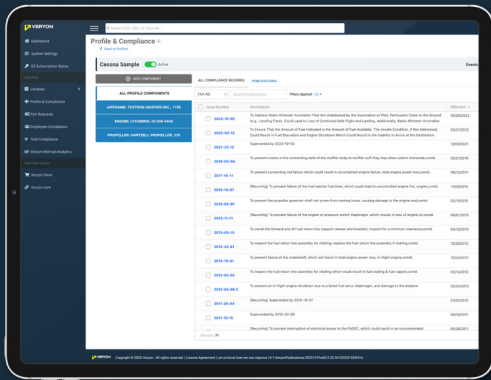

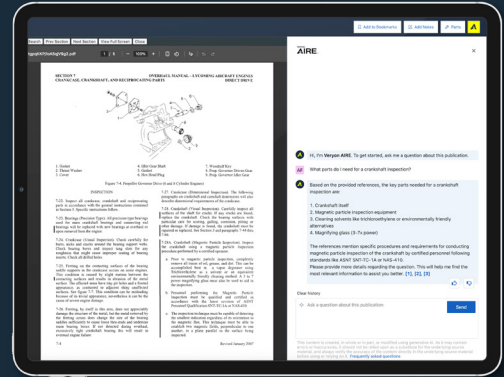

A Modern Publications Library Interface

The new Veyron Publications library delivers a faster, smarter way to access the information you need. A clean, modern layout makes scanning effortless, while improved search responsiveness, multi-select filters, and support for historical and content-based searches ensure you find the right document in seconds. Designed for efficiency, the updated interface helps operators spend less time searching and more time maintaining.

Powered by Veryon AIRE

Skip the endless scrolling and content searching. **Veryon AIRE**, our built-in AI assistant, understands your query, directs you to the right section instantly, and saves you hours. Fully integrated within Veryon Publications, Veryon AIRE helps you find exactly what you need—faster, smarter, and with greater accuracy.

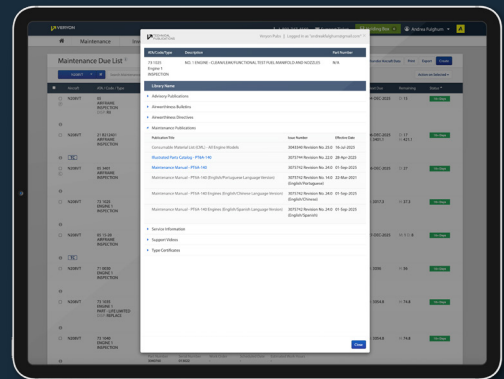

Profile and Compliance Module

Full AD research capabilities, including appliance ADs, built right in. Veryon streamlines compliance tracking and reporting, saving you valuable time while keeping you audit-ready with clean, organized reports. Stay ahead of every compliance requirement without juggling extra systems or manual processes.

Seamless Integration with Veryon Maintenance Tracking

Publications, compliance, and maintenance data work best together. By integrating directly with Veryon Maintenance Tracking, operators save hours by eliminating duplicate data entry and manual cross-referencing. Everything you need is in one connected ecosystem that keeps your operation running smoothly.

WHAT OUR CUSTOMERS ARE SAYING

At first, we thought Vveryon’s subscription was more expensive than our OEM plans but after using it, we realized how much time it saves us every week. We don’t have to jump between portals or worry about missing ADs anymore. It’s all right there. ”

Maintenance Manager
Regional Operator

Value That OEMs Can’t Deliver

CATEGORY	STANDARD OEM	VERYON PUBLICATIONS
Upfront Cost	\$ Lower sticker price (but fragmented access and manual research)	\$\$ Slightly higher (one hub with automation, AI efficiency, and lower total cost long term)
Access	Multiple logins and portals	Single hub for all OEM and regulatory content
Regulatory & AD Research	Manual research, time-consuming process	Automated AD and regulatory tracking built in
Search & Navigation	Basic keyword search, limited results	AI-powered, context-aware search with Vveryon AIRE™
Efficiency	Hours spent switching systems	Faster access and cross-linked information
Maintenance Integration	Stand-alone portals, no data connection	Seamlessly connected with Vveryon Maintenance Tracking
Operator Time Investment	High - 10-15 hours/month	Low—2-3 hours/month
Overall Experience	Fragmented and manual	Integrated, intelligent, and intuitive
Total Cost of Ownership	Appears cheaper, costs more over time	Slightly higher upfront, significantly lower total cost

The difference becomes clear when you look at the total picture. OEM subscriptions often seem straightforward, but the reality is a maze of disconnected portals and manual regulatory research that costs operators valuable time.

Veryon brings everything together. One hub, powered by automation and AI, connects publications, regulatory content, and maintenance data—saving operators hours every week while reducing risk and improving operational confidence.

The difference is clear:

- **OEM subscriptions:** Cheaper invoice but fragmented access, manual research, and multiple disconnected portals.
- **Veryon Publications:** A single hub that delivers automation, AI-powered efficiency, and seamless integration—reducing total cost of ownership and giving you time back.

When you look beyond the price tag, the real value becomes obvious. That's the unrealized value inside your Veryon subscription.

OEM subscriptions may look cheaper at first glance, but they leave operators juggling multiple portals, tracking compliance manually, and wasting valuable time. Veryon turns all of that complexity into one intelligent, integrated solution—unlocking value that goes far beyond a line-item price.
